Methylsulfonyl PCB Congeners

AccuStandard, Inc. is the only company to synthesize and purify all 209 individual congeners. Now, an important group of persistent PCB metabolites, the methylsulfonyl PCBs (MeSO₂-PCBs) have been added to AccuStandard's wide selection of chemical reference standards. Only the 3- and 4-MeSO₂-PCBs with chlorine atoms in the 2,5- or 2,3,6-position have been found in environmental samples, and therefore only those are offered by AccuStandard.
